Flipkart

GenZ Commerce Strategy

TEAM Stratify

Positioning, Market and Competitive Landscape

Market Today

The Market Has Fractured Into Four Commerce Models

Traditional E-Retail ~\$50B GMV (2024) 10–12% growth YoY ↓ (slowing) Flipkart · Amazon · Snapdeal	Quick Commerce \$6–7B GMV (2024) 40%+ growth YoY ↑ ↑ Blinkit · Zepto · Instamart
Flipkart presence	LEADS CHASING PARTIAL ABSENT
Trend-First Commerce \$2–2.5B today → \$8–10B by 2028 4x growth expected ↑ ↑ Myntra FWD · AJIO · Snitch · Zudio	Social Commerce \$7.2B GMV (2024) → \$54B by 2033 22% CAGR ↑ ↑ Instagram · YouTube · Moj

Company	GMV/Scale	GenZ's perspective	Owns discovery?	Tier 2 & 3 reach?	Creator Layer?
Flipkart	\$24.7B · 350M users	"Buy what I already want"	✗	✓	✗
Amazon	\$22.7B · 100M+ users	"Trusted purchase, fast"	✗	✗	EARLY
Meesho	~\$6B · 120M MAU	"Discover cheap stuff for hours"	✓	✓ ✓	✗
Myntra/Ajio	\$9.8B / ~\$5B	"Define my style"	Partial	Partial	✗
Blinkit/Zepto	\$6–7B QC mkt	"Essentials, right now"	✗	✗	✗
Instagram/YT	~\$7.2B social commerce	"Make me want things"	✓ ✓	✓	✓ ✓

The quiet threat. Rose from ~1% to 8.9% market share in 4 years. 87% of its 213M users are outside Tier-1 cities --> the same users Flipkart needs for its next growth chapter.

A pipeline Flipkart doesn't own. 70% of Gen Z purchase journeys start here. Flipkart only enters at checkout. Closing this gap is the central thesis of our strategy.

Flipkart Today

\$24.7B GMV 2024

48% market share

350M+ registered users

20,000+ pincodes via EKart

Revenue Mix

What It's Built Well

- Ekart: proprietary last-mile into Tier-2/3 India
- Seller ecosystem: 1.4M+ sellers, SME-heavy
- Walmart capital + supply chain infrastructure

Where It Bleeds

- Squeezed top and bottom: Blinkit/Zepto eating urban frequency, Meesho eating Tier-2/3 volume
- Flipkart Minutes: late to quick commerce, brand association still trails Blinkit by a wide margin
- Gen Z attempt = SPOYL (2023) : a product tab crawling 6,000 trend signals, not a platform shift
- IPO pressure forces financial discipline while cash burns on Minutes -> structural contradiction

The Gen Z Behavioral Portrait

377M

Gen Z in India --> more than the US population

\$860B → \$2T

Spending power today vs. 2035

43%

of India's total consumption already driven by Gen Z

1 in 2

Gen Z will be earning by 2025

47%

of all fashion & lifestyle spend in India is Gen Z

User Personas

The Trend Chaser

Riya, 21 • Metro • Mid income

- Opens: Instagram, Myntra, YouTube
- Discovers via: Reels, creator hauls, "get ready with me" videos
- Buys when: a creator she trusts wears it first
- Won't tolerate: slow discovery, generic recommendations
- Flipkart relationship: Goes there for electronics. Not fashion.

The Value Researcher

Arjun, 23 • Tier-2 • Lower-mid income

- Opens: YouTube, Meesho, Flipkart (price checks)
- Discovers via: YouTube reviews, WhatsApp group recs
- Buys when: he's compared options and found the best value
- Won't tolerate: paying more than he has to, fake reviews
- Flipkart relationship: Finds it genuine, finds Meesho cheaper.

The Creator-Consumer

Zoya, 19 • Semi-urban • Variable

- Opens: Instagram, YouTube Studio, Amazon (affiliate)
- Discovers via: global trends, other creators, comment sections
- Buys when: self-expression or content investment
- Won't tolerate: being treated as just a buyer, not a creator
- Flipkart relationship: Shops on it, no reason to advocate for it.

What Gen Z around us actually told us

We ran a primary survey across our friends to pressure-test our hypotheses, 36 responses from Gen Z shoppers across metros and Tier-2 cities. The two most directly relevant findings are shown here.

Have you ever abandoned a Flipkart purchase mid-way and gone to research it elsewhere? What made you leave?

35 responses

[Copy chart](#)

- Reviews felt fake or too old
- Couldn't find sizing/fit information relevant to me
- Didn't know if the price was actually a good deal
- No way to know if it was still trending or already outdated
- I trusted another platform's reviews more

Have you ever wanted to buy a creator's merchandise but didn't complete the purchase? Why?

36 responses

[Copy chart](#)

- The checkout link took me to an unfamiliar website
- I didn't trust the payment/delivery
- It only delivered to metros, not my city
- I didn't know where to find it after seeing it once
- I actually bought it without any problem

Strategic Lever 1 : FLIPKART CIRCLE – Community Wishlists

The User Experience Gap

Every e-commerce platform is built as a solitary experience.

56% of Gen Z say friends and family influence purchases most. Above influencers, above reviews

60% are influenced by creator recommendations at the point of decision

Gen Z **crowdsources opinions** via WhatsApp, Reddit, group chats for almost every buy

We lose the wallet at the single most critical moment—"peer validation", because we have no infrastructure for it.

THE SOLUTION : Public Collections

Flipkart's current wishlist is private, invisible, dead. Zero social or commercial value.

The Change --> Wishlists become Collections:

- Every wishlist gets a name, a cover, a purpose
- Made public and followable by default, like a Pinterest board, but every item is buyable
- User-titled: "Hostel setup ₹5K" / "Fest fits" / "Tech actually worth it"
- Anyone can follow a collection, get notified when it updates, and buy/add any item.
- Trending collections surface on a dedicated tab, discoverable without connections

The passive social proof layer — on every product page:

- "14 people in your circle saved this" — shown quietly under the product title
- "Your friend Priya bought this last month" — with purchase consent enabled
- "Featured in 3 trending collections" — signals that real curators rated this worth saving
- Three privacy tiers: Public / Circle only / Private :- Circle is the default

Utilising the influencer stronghold :

- Verified creator Collections, a permanent storefront on Flipkart, not a link-in-bio redirect
- "My current wardrobe" / "Gear I use" in their voice, shoppable instantly by followers
- Creator earns commission. Flipkart captures the sale that previously got lost on Instagram.

Why This Helps Capture Maximum Wallet Share

Flipkart's biggest advantage (multi-category depth) is currently invisible to Gen Z because they arrive with single-category intent.

One peer collection titled "Moving to hostel" or a lifestyle creator collection pulls all categories in a single session, replacing four separate platform visits to Myntra, Amazon, Meesho, Nykaa

Why Flipkart wins this

What's needed	Flipkart	Competitors
Multi-category depth	✓ Fashion + electronics + home + beauty	Myntra (fashion only), Meesho (value only)
Fulfillment at scale	✓ Ekart, 20,000+ pin codes	Instagram (no fulfillment)
Existing user base	✓ 350M users — latent social graph	New entrants start from zero
Transaction trust	✓ Decade of purchase trust	Social platforms can't replicate

The moat: Social shopping only works on a platform people already trust with their money.

Strategic Lever 2 : Utilising the data to build trust

66%

of Gen Z avoid a product if reviews feel outdated or insufficient

67%

rely on reviews most – above friends, above influencers

38%

abandon purchases specifically due to distrust

40%

chance of no return when a user exits for research

Flipkart already has all the data needed to fix this but none of it is visible to the user.

FIX 1 → "Is This Worth It?" Tab

A dedicated tab on every product page : **four signals** built entirely from data Flipkart already holds, just never surfaces.

Kept Rate : "91% of buyers kept this" pulled from actual return data.

Price History : 30 day price graph. "Lowest price this month"-like tags.

Buyer Match : reviews filtered by city tier, age range, body type.

Trend Signal : SPOYL already scans 6,000 social signals across Instagram, Pinterest, and fashion portals, predicting micro-trends before they go mainstream.

A quiet, three-stage indicator on the product page:

● Early / ● Peak

reflecting where this product sits in its social trend cycle right now.

- Shown only when someone is already considering a product
- "Early" validates Gen Z's taste before mainstream catches up.

Gen Z trusts the product

FIX 2 → Signal Notifications

Every Gen Z user has Flipkart notifications turned off. The channel is completely wasted.

**Delete 90% of notification types.
Rebuild around three only.**

- **Price Drop** : only on specifically saved items. "The JBL earphones you saved dropped ₹400."
- **Stock Alert** : "3 left in your size" on saved fashion. Real inventory, not manufactured urgency.
- **Circle Signal** : "Your friend just wishlisted this" to drive interest and exploration.

Gen Z trusts Flipkart's communication

FIX 3 → Fit Intelligence

The fashion wallet goes to Myntra because Gen Z trusts Myntra's sizing more.

Fit Intelligence closes that gap with a one-time setup that creates a permanent switching cost.

- User **enters measurements + fit preference** once
- Every fashion page then shows: "**Based on your profile** – order S, this runs large"
- **Reviews filtered** to people with similar body type
- Leaving for Myntra means starting from zero – no profile, no matched sizing, no context

Gen Z trusts the fit

Entering a new category : FLIPKART CREATOR COMMERCE

What It Is

A dedicated vertical inside Flipkart where creators launch, sell, and fulfill their own branded merchandise and products -> Flipkart as invisible infrastructure.

What the creator gets :

Buyer gets:

- Favourite creator's merch and products on a platform they already trust
- Flipkart buyer protection, reliable delivery, easy returns
- Discovery -> find a creator's merch even without following them

MARKET SIZING

TAM **INR 1,08,000 Cr**

SAM **INR 18,500 Cr**

SOM **INR 900-1100 Cr**

Flipkart's internal "1% rule" requires new categories to show a path to ~\$200-500M GMV within 24 months. Creator Commerce meets this bar without needing heavy logistics investment.

Competitive Gap Analysis

THE BUYER'S PROBLEM:

Link-in-bio -> unfamiliar Shopify store -> untrusted payment -> metro-only delivery

Purchase intent dies at step 2

Fan loyalty exists but no trusted purchase infrastructure.

Platform	What They Have	Critical Gap
Amazon Creator Central	Affiliate storefronts	Affiliate-only, creator doesn't own the product
Instagram Shopping	Product tagging	No fulfillment, no COD, fails outside metros
Shopify	Full store builder	No audience or logistics, no Indian payment optimisation
Blinkstore	Print-on-demand for creators	No marketplace discovery, no Ekart scale

Entering a new category : *FLIPKART CREATOR COMMERCE*

Creator Storefront (User View)

A verified creator page that lives natively on Flipkart. Users follow creators, browse their drops, and buy directly, without ever leaving the app.

Countdown timers on limited drops create real urgency.

Past collections stay shoppable, so the storefront earns even between launches.

Creator Dashboard (Creator View)

Everything a creator needs to run their shop (sales, earnings, shipping status, top products) in one clean view.

Upcoming drops can be scheduled and managed in advance.

Ekart handles all fulfillment; the creator only sees the numbers.

Implementation

TASK	M0	M1	M2	M3	M4	M5	M6	M7	M8	M9	M10	M11	M12		
Data Infra & Signal Pipelines														Build pipelines for product, price, & trend data	PHASE 1: FOUNDATIONS
Social Graph & Privacy Architecture														Set up user connections & privacy controls	
Creator Commerce Backend Setup														Enable creator tools, commissions, & sourcing	
Flipkart Circle (Collections MVP)														Launch public, followable collections	PHASE 2: CORE EXPERIENCE BUILDS
Social Proof Layer (Product Page)														Add peer signals on product pages	
“Is This Worth It?” Trust Layer														Show kept rate, price history, and trends	
Fit Intelligence System														Build personalized sizing system	
Smart Notification System Revamp														Shift to high-intent alerts only	
Creator Storefront (Beta Launch)														Launch creator shops and drops	PHASE 3: CREATOR COMMERCE + SCALE
Creator Dashboard & Drop Tools														Provide analytics and drop tools	
Logistics & Ekart Integration for Merch														Enable delivery, COD, and returns	
Creator Acquisition & Partnerships														Onboard and activate creators	
Creator Merch Discovery Layer														Build discovery across app surfaces	
Scale, Optimization & Full Rollout														Expand, optimize, and market	

Trade-Offs and Prioritisation

What We're Deliberately Not Doing

✗ Building a social discovery feed to compete with Instagram

- Instagram has a decade headstart and 600M Indian users, a Flipkart feed will feel like a worse version for years
- We embed Flipkart into existing discovery platforms instead of replicating them
- We own what comes after discovery → validation, trust, and purchase

✗ Doubling down on quick commerce for Gen Z

- Blinkit and Zepto hold 50%+ market share with entrenched habit loops — we're 3 years late
- Capital required to compete meaningfully dwarfs all three of our initiatives combined
- We compete on depth of basket, not speed of delivery

✗ Chasing Meesho's ultra-value positioning in Tier-2/3

- Copying Meesho's price positioning means margin erosion on a battlefield they'll always win
- Our Tier-2/3 play is creator commerce - regional fans buying branded merch at ₹600+ that Meesho can't serve
- We target the Gen Z user who wants more than Meesho offers

✗ Spinning Creator Commerce into a standalone app

- Marketplace discovery and purchase trust — Flipkart's two strongest assets — disappear outside the ecosystem
- A standalone app competes with Blinkstore and Shopify from zero users, zero trust
- Inside Flipkart, every creator storefront benefits from 350M users and a decade of buyer confidence from day one

Prioritisation

RICE Formula: Score =
(Reach × Impact ×
Confidence) / Effort

Rules:

- Higher score = higher priority
- All dimensions rated 1–10
- Effort is the only drag, higher effort, lower score

Feature	Reach	Impact	Confidence	Effort	Total RICE Score
Flipkart Circle — Collections	9	7	8	3	168
Signal Notifications Revamp	10	5	9	3	150
Creator Commerce	9	9	6	6	81
Social Proof Layer	8	4	8	4	64
"Is This Worth It?" Tab	8	5	8	5	64
Fit Intelligence	6	5	7	6	35

Circle scores highest (168)

Built on existing infrastructure. The social graph it creates compounds → making it the highest-ROI first move.

Creator Commerce ranks 3rd despite max impact.

Sequenced last intentionally — Circle builds the user base and creator relationships it needs to succeed.

Success Metrics

FLIPKART CIRCLE

Metric	Target	
Cross-category GMV per collection-driven session	2.3x vs. non-collection sessions by M12	
Collections created per MAU	15% of active users create ≥1 collection in 6 months	
Creator collection conversion rate vs. standard PDP	1.8x higher by M9	
Creator collection conversion rate vs. standard PDP	25% CTR on passive social proof layer by M6	

DATA-TRUST LAYER

Metric	Target	
Fashion wallet share gap vs. Myntra	Close by 8–10pp in Tier-1 by M18	
"Is This Worth It?" tab open rate on fashion PDPs	35%+ within 3 months of launch	
Notification opt-in rate post-rebuild	22% opt-in on saved items (from near zero)	
Return rate delta : Fit Intelligence users vs. non-users	30% lower return rate by M12	

CREATOR COMMERCE

Metric	Target	
GMV per active creator storefront	₹2.5L avg by end of Y1, ₹3L by Y2	
Active creator storefronts onboarded	3,000 by M12	
Drop sell-through % within 48 hours	60%+ per drop	
Buyer repeat rate from creator purchases	35% rebuy within 60 days	

Risk Management

Feature	RISK	MITIGATION
Flipkart Circle	Privacy backlash Default-public wishlists feel invasive → triggers mass opt-out before the feature builds any value	Opt-in architecture Circle-only as true default. Public is opt-in, never opt-out, earn trust before expanding visibility
Trust Layer	Data manipulation Sellers game Kept Rate via fake no-return purchases, making the trust signal worse than useless	Verified-only weighting Count only purchases 30+ days old, cross-referenced against review sentiment to catch anomalies
Fit Intelligence	One wrong call = permanent trust loss A single bad size verdict destroys the fashion wallet permanently, worse than no recommendation at all	Never verdict, always question "Buyers like you preferred S, does that match you?" shifts accountability while still delivering value
Signal Notifications	Thin graph kills the channel Sparse social graph turns Circle Signal to noise, one irrelevant alert and users disable all notifications forever	Graph density gating Gate Circle Signal at 5+ connections. Only Price Drop alerts until then — protect the channel before expanding it
Creator Commerce	Classic cold start No buyers without creators, no creators without buyers, the vertical dies before it builds momentum	Seeded launch Onboard 50 mid-tier creators first, guarantee homepage placement on drop 1, manufactured momentum.

Bottom-Up Market Sizing

TAM (Total Addressable Market)

- Creator merch drops = ₹29,000 Cr
- Creator-led D2C brands (fashion subset) = ₹43,000 Cr
- Live commerce (projected) = ₹12,000 Cr

$$\text{TAM} = 29,000 + 43,000 + 12,000 = ₹1,08,000 \text{ Cr}$$

SAM (Serviceable Addressable Market)

Type 1: Merch creators

- No. of creators = 10,500
- Avg GMV/creator/year = ₹4,00,000
- Total GMV = $10,500 \times 4,00,000 = ₹4,200 \text{ Cr}$

Type 2: Creator D2C sellers

- No. of sellers = 150,000
- Avg GMV/seller/year = ₹95,000
- Total GMV = $150,000 \times 95,000 = ₹14,300 \text{ Cr}$

$$\text{SAM} = 4,200 + 14,300 = ₹18,500 \text{ Cr}$$

SOM (Serviceable Obtainable Market)

Type 1: Merch (platform cut)

- Active storefronts = 8,000
- Platform GMV = ₹3,200 Cr
- Take rate = 15–18%
- Revenue = $3,200 \times (15-18\%) = ₹430-540 \text{ Cr}$

Type 2: Creator D2C (marketplace cut)

- Active sellers = 25,000
- Platform GMV = ₹6,000 Cr
- Commission = 8–10%
- Revenue = $6,000 \times (8-10\%) = ₹480-600 \text{ Cr}$

$$\text{SOM} = 430-540 + 480-600 = ₹910-1,140 \text{ Cr}$$

THANK YOU!

Team Stratify
